In the decades since kidney replacement therapies have become mainstream in North America this care has become associated with a number of recurring ethical challenges. In this session, challenges such as patient nonadherence, patient aggression, and the continuation of treatment when it has become overly burdensome will be revisited. I will interrogate whether attempting to identify shared underlying contributing factors to these seemingly isolated issues might inspire different kinds of creative responses and preventive measures.

More information: please call 780-492-6676, e-mail dossetor.centre@ualberta.ca or visit [Dossetor Centre website](#)

A recording of this presentation will be posted at a later date on the [Health Ethics Seminar webpage](#)
