

Session 5: The Individual Discussion Points and Questions

The following discussion points and questions were raised post session:

- We need to look at the relationships and the interactions between individuals and the organisations they work in
- We need to acknowledge that (nurses) prefer socially driven information, and this may have repercussions for the current drive towards information technology driven information/evidence
- We need to consider the important role that the clinical leader has as someone who can facilitate or impede knowledge utilisation and transfer
- Need to refocus on the soft-systems factors (e.g. values and beliefs) that need to be present in order to facilitate knowledge utilisation and transfer
- We need to borrow and develop ideas from the management sciences literature
