

# Preceptor Connection: Library Resources and Searching Refresher - Session for Students AND Preceptors

Janice Kung & Deanna Townsend  
September 17th , 2024

The left side of the slide features a collection of teal and white medical icons. From top to bottom, they include a stethoscope, a syringe, a heart with an ECG line, a pill, and a microscope. The background is a light teal color with faint, larger-scale versions of these icons.

# Library Resources Overview

U of A & AHS

# Attention: Preceptors!

## Apply for U of A Library Access!

**Clinical Preceptors:** 120 days  
**Clinical Academic Colleagues:** 3-year rolling term

### Wealth of journals & Resources!

Increased access to journals not available at AHS.

E.g. Scopus/Web of Science

## Preceptor Library Access Form

### Library Access Form For Preceptors

Please note the following information is being requested so we can ensure you are entered into our human resources database at the University of Alberta 1) accurately; and 2) without making a duplicate entry. Once you are entered into our database, you will then be recognized as a Clinical Preceptor and given a CCID which will enable electronic library access. All of these fields must be completed in order for you to be assigned a CCID in our database.

Once approved, library access is granted for 120 days (except for CAC appointed preceptors).

# Point of Care Tools

## Clinical Topics & Answers

Evidence-based clinical decision support for all health care staff written by physicians.  
**Best for its:** Breadth/depth of clinical topics, expert overviews and recommendations, easy to find related practice guidelines.  
Integrated into [Connect Care](#)

Evidence-based information to support nursing practice at the point of care.  
**Best for its:** Nursing focus, including: nursing considerations for each clinical topic, nursing care plans, patient teaching library.  
Integrated into [Connect Care](#)

Summarizes Current Evidence

Information is Concise

## Clinical Skills & Procedures

Step-by-step guidance, covering nursing, physical therapy, and respiratory therapy procedures and skills.  
**Best for its:** Clear skill checklists, procedures with images/videos, groupings by specialty settings.  
Integrated into [Connect Care](#) and Desktop Shortcut (on most AHS devices)

Supports Clinical Questions & Skills

Connect Care Integrated

## Drug Information

Comprehensive drug information with several specialty collections and resources (Trissel's IV-Check, Briggs Drugs in Pregnancy and Lactation, Martindale, ect.)  
**Best for its:** Patient information handouts, and specialty resources.  
Integrated into [Connect Care](#)

Easy to Use & Search

Mobile Accessible

Comprehensive drug information and clinical decision support tools.  
**Best for its:** Poisoning and toxicology resources

SECTIONS:

**Overview and Recommendations**[Related Topics](#)[General Information](#)[Epidemiology](#)[Etiology and Pathogenesis](#)[Clinical Presentation](#)[Diagnosis](#)[Treatment](#)[Complications and Prognosis](#)[Prevention and Screening](#)[Guidelines and Resources](#)[Patient Information](#)[References](#)[< Previous Section](#) [Next Section >](#)

## Overview and Recommendations

### ☰ In this Section

### Background

- Influenza in adults is a **major** cause of mortality and morbidity worldwide.
  - Annual epidemics in adults and children are associated with an estimated 3-5 million cases of severe illness and about 290,000-650,000 deaths.
  - Influenza infection is seasonal in temperate countries, with peaks during the winter months, but has sustained activity throughout the year in tropical climates.
- **Influenza** is a single-stranded, segmented, negative-sense, RNA virus, and member of the Orthomyxoviridae family.
  - Infection can be caused by 1 of 3 types of influenza virus, subtypes A, B, and C.
    - Influenza A and B are the dominant circulating viruses causing seasonal influenza epidemics.
    - Influenza C is believed to cause mild infection, but does not contribute to seasonal epidemics.
  - Minor genetic variations (antigenic drift caused by accumulating random mutations) are the cause of seasonal variation.

SECTIONS:

[Recommendations from Professional Organizations](#)

**[Vaccine Composition, Formulations, and Dosing](#)**

[Vaccine Selection and Efficacy](#)

[Cautions and Adverse Events](#)

[Additional Information](#)

[Guidelines and Resources](#)

[Patient Information](#)

[References](#)

## Seasonal Vaccine Composition

- composition of seasonal influenza vaccines is adjusted annually based on predicted circulating strains
  - trivalent vaccines contain hemagglutinin (HA) antigens derived from 3 influenza virus strains (A/H1N1, A/H3N2, and B)
  - quadrivalent vaccines contain same antigens as trivalent vaccine, plus HA antigens from second B virus strain
- World Health Organization (WHO) recommended composition of seasonal influenza vaccines for 2022-2023 Northern hemisphere influenza season
  - egg-based influenza vaccines
    - quadrivalent formulation
      - A/Victoria/2570/2019 (H1N1)pdm09-like virus
      - A/Darwin/9/2021 (H3N2)-like virus
      - B/Austria/1359417/2021 (Victoria lineage)-like virus
      - B/Phuket/3073/2013 (Yamagata lineage)-like virus
    - trivalent formulation

# Searching for Research Purposes

Advanced

# Steps in a Systematic Search

1. Develop a clear, searchable research question
2. Identify key concepts from the research question  
Frameworks can organize these ideas
3. Organize concepts into circle diagram  
Visualize how concepts relate
4. Identify synonyms for each concept  
Language is important
5. Combine search concepts using appropriate operators  
(AND, OR)

# Sample Research Question

**For patients 65 years and older, does the use of an influenza vaccine reduce the future risk of pneumonia compared with patients who have not received the vaccine?**

# Identify Concepts in Research Question

**P** Population or Problem

**I** Intervention

**C** Comparison

**O** Outcomes

S - Study design

T - Time

S - Setting

<b>PICOS</b>	<b>Ask yourself:</b>	<b>Example:</b>
<b>Population</b> (patient)	How would I describe a group of patients similar to mine? <i>What main problem am I studying?</i>	
<b>Intervention</b> (drug, procedure, etc.)	Which main intervention, am I considering?	
<b>Comparison</b> (optional)	What is the main alternative to compare with the intervention?	
<b>Outcome</b>	What can I hope to accomplish, measure, improve or affect?	
<b>Study design</b>	What study design would provide the best level of evidence for this question?	

# Another Way to Break Down Research Questions

What are the experiences of pharmacists working in disaster settings (e.g. wildfire emergencies)?

<b>P</b>	Population or Problem	Pharmacists
<b>C</b>	Concept	Experiences
<b>C</b>	Context	Disaster settings

# Sample Research Question

For patients **65 years and older**, does the use of an **influenza vaccine** reduce the future risk of **pneumonia** compared with patients who have not received the vaccine?

SET 1

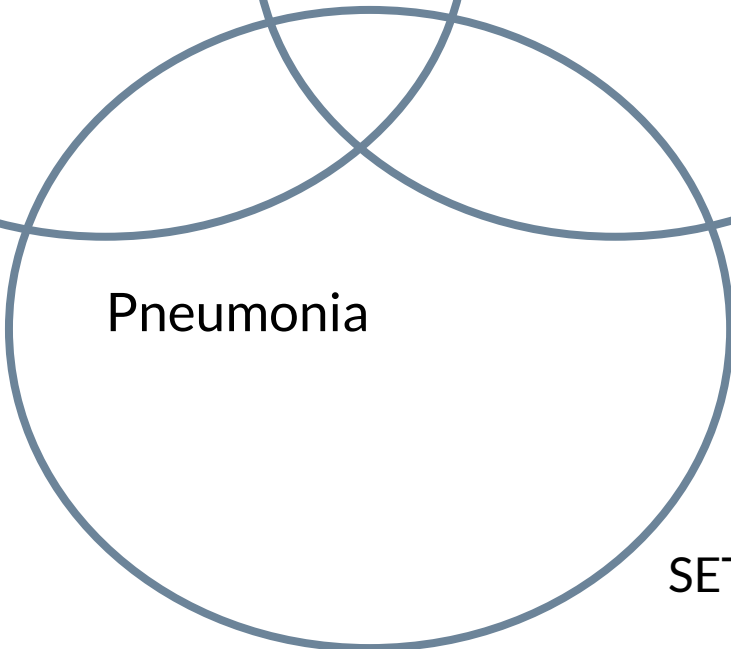

Older adults

Influenza vaccine

SET 2

Pneumonia

SET 3

**Move Major Concepts  
to Bubbles**

SET 1

Geriatric

Elderly

Influenza vaccine

Flu vaccine

Flu shot

SET 2

Pneumonia

Lung inflammation

Respiratory tract  
infections

SET 3

**Identify Synonyms &  
Related Terms**

SET 1

Older adult\*

Geriatric\*

Elderly

Influenza vaccin\*

Flu vaccin\*

Flu shot\*

SET 2

Pneumonia\*

Lung inflammation\*

Respiratory tract  
infection\*

SET 3

**Tip! Use  
truncation \***

# How to Develop a Better Search?

**Truncation:** kidney\* = kidney, kidneys

→ Be careful that the root word is not too short! e.g. cat\*

**Synonyms:** cancer, neoplasms, tumor, malignancy

→ Can be true synonyms, subtypes/examples, methods

**Antonyms:** barriers/facilitators, success/failure

**Alternate spellings:** optimise, optimize

**Trade names/Generic names:** Tylenol vs. acetaminophen

**OR** = More (older adult\* OR geriatric\* OR elderly)

**AND** = Less (older adult\* AND flu shot\* AND pneumonia\*)

# Combine Terms: Boolean Operators

Operators tell the database exactly how to combine terms:

- Synonyms are combined with **OR**
- Different Concepts/Sets are combined with **AND**

(older adult\* **OR** geriatric\* **OR** elderly) **AND** (influenza vaccin\* **OR** flu vaccin\* **OR** flu shot\*) **AND** (pneumonia\* **OR** lung inflammation\* **OR** respiratory tract infection\*)

**Before Going to MEDLINE..**

# MEDLINE Search Tips

- Search keywords one at a time, line by line
- Include subject headings where relevant, “tags”
  - Use **Scope Notes** to find more keywords
- **.mp.** = Keyword search, machine reading “many places” of the record
- **.ti.** = Search only in the **title** of the article
- Save your search!
