

CFI JELF Assessment Criteria

2. Researchers

Criterion standard: The researchers demonstrate excellence and leadership at a level appropriate for the stage of their career. The researchers have the expertise or relevant collaborations to conduct the research or technology development activities.

- Describe the researchers' track record, including scientific and technical expertise relevant to conduct the proposed activities.
- Describe the collaborators' and partners' contributions essential to the success of the proposed activities.

Researchers

Why is this the best team to be doing this research with the requested infrastructure?

- Up to three candidates (Project Leader and 2 co-PI's) can be listed
- Discuss each candidate's track record - scientific and technical expertise
- Collaborators' and partners' contributions essential to the success of the research

Researchers - helpful tips

- The CFI expects that each member of the research team has the expertise and experience to:
 1. Lead and carry out the research
 2. Operate and train others on the infrastructure
- Explain how each researcher will use the infrastructure
 - May work collaboratively on all requested infrastructure
 - May work independently on infrastructure items*

*there must be a logical theme that ties the projects together

Researchers - helpful tips

- Collaborators & partners:
 - Who? Where? What is the nature of the collaboration?
 - Should be established collaborations
 - How will the applicant(s) benefit from the collaboration?
- Collaborations/partnerships can mitigate lack of expertise with research methods or requested infrastructure
